SHOT

LBP-1210

Introducing the Laser Shot LBP-1210.

Leading performance and functionality
with the power of CAPT.

- High performance and print quality
- Print speed up to 14ppm (A4)
- Up to 2400 x 600 dpi
- First page out in less than 10 sec
- USB and parallel interfaces

Canon

Reliable Performance With Canon Technology

In today's world of super-efficient printers, Canon leads the race by making new technological discoveries at an astonishing pace. Our breakthroughs enable today's offices to push their performance and productivity regardless of size.

The latest addition to Canon's established laser printer family, the stylishly compact Laser Shot LBP-1210, empowers your business to operate at today's gruelling pace. Designed to meet the unique needs and budgets of SOHOs, the LBP-1210 is an ever-dependable workhorse with a respectable printing speed of 14ppm (A4), delivering the first page in less than 10 seconds.

And true to its strong Canon pedigree, you can be assured of a perfect finish with crisp, clean and laser-sharp output through the remarkable innovations of CAPT (Canon Advanced Printing Technology). With the LBP-1210, Canon once again delivers uncompromised quality and efficiency in an affordable package, proving that a small investment can sometimes pay off in a big way.

LBP-1210

Speed Things Up

Because time is money, the LBP-1210 sprints to finish the job by taking less than 8 seconds to start up and by delivering the first print in less than 10 seconds. Being quick to the start means you'll get the job done faster giving you more time for life's other pressing matters. So test the LBP-1210 for yourself and see how it gives other printers a run for their money.

Needing Little, Giving Much

True to its promise of building a greener future, Canon boosts the LBP-1210 with a super efficient power management system. As a result, this printer consumes so little power, it would make both the cost and eco-conscious proud. And even though the LBP-1210 makes perfect 'cents', performance is never sacrificed.

Good Things Come In Small Packages

The LBP-1210 is designed with the constraints of the SOHOs in mind. It packs in easy-to-use functionality in a small footprint of 388 x 524 mm (W x D), leaving you plenty of room on your workspace for other office peripherals. But the light-weight and compact LBP-1210 printer more than makes up for its petite dimensions with its cool, stylish design.

As Flexible As Paper

The LBP-1210 handles paper with consummate ease. On both manual and cassette feed, it accepts paper of various sizes ~ Letter, A4, B5 or Executive, and it also prints on a variety of media like transparencies, labels, envelopes, postcards and other special papers. By giving you a wide communication repertoire, you can now make your business presentations more visually appealing. The LBP-1210 stores up to 250 sheets of 64g/m² plain paper with a maximum stack height of 25mm. On manual feed, sheets should be fed one at a time. Delivery can be face up or down.

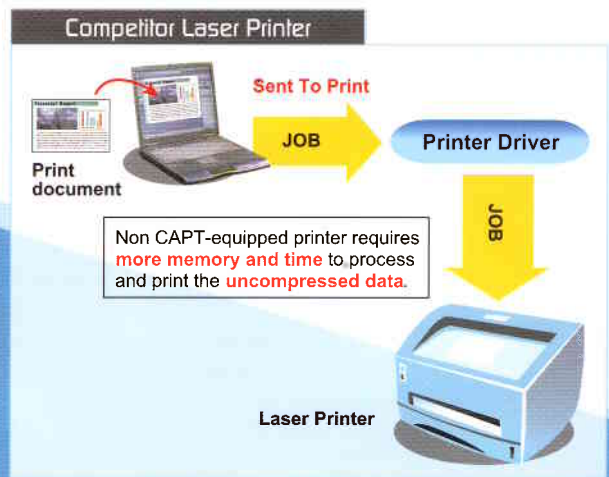

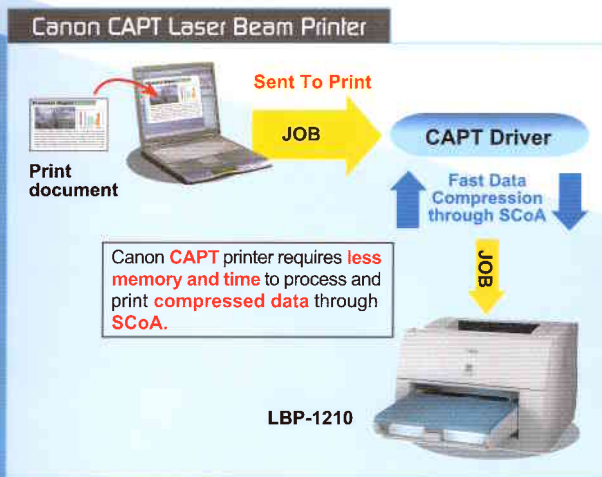

Everyone Can Use It—Network Capable

Boost the efficiency of everyone in the office by simply snapping on the AXIS 1610~ the optional network adapter that links your printer directly to a network without having to go through a server. With fuss-free connectivity like this, your office can operate at optimum productivity just minutes after you take your new LBP-1210 out of its box.

Shhh... It's Working

Believe or not, the LBP-1210 can introduce a sense of calm to your office. So refined is its technology, it brings noise pollution down to a barely audible level. Therefore, it works without disrupting the serenity of your work environment. Its quiet operation makes it ideal for an open office plan.

CAPT Leads The Way

The next big thing in printer technology has arrived. It is known as CAPT for Canon Advanced Printing Technology. With this revolutionary breakthrough, Canon has effectively reduced the cost of ownership of Canon Laser Beam printers as owners no longer need to invest in additional memory or upgrades. Even more remarkable is the fact that CAPT can be found in an affordable printer like the LBP-1210; so even the budget-conscious SOHOs can benefit from this discovery.

This is how it works. CAPT empowers your printer engine to tap into your PC's speedy processor and memory and through Canon's proprietary **SCoA (Smart Compression Architecture)**, it smartly compresses print data using your computer's memory to greatly reduce waiting time. Even when handling huge amount of data, CAPT-equipped Canon Printers utilise less memory. They are able to do their job faster and more efficiently without compromising on quality. That's not all. With CAPT, you can set custom paper sizes, overlay bitmaps on documents, tile up to nine pages on one sheet of paper, and switch easily between complicated set-ups to user-defined profiles. The Status Window provides you written and spoken feedback on your print jobs, even over a network. Simply put, once you have a taste of the power of CAPT, you'll never go back to printing without it.
